

Set Default Chapter-Toggle

I experienced that it annoys me alot that you always need to Open the

Drop-Down from each Chapter.

Which looks like this:

Enter Custom Code

So i found a Way on how to set a Default to always toggle those Chapter open.

Basicly you only need to open the Bookstack "Settings-Page" from your Wiki and then open the "Customization" Tab, scroll to the Bottom of the Page and insert the following Code into the "Custom Code Section":

```
<style>
.chapter-contents-toggle {
  display: none !important;
}
.inset-list {
  display: block !important;
}
```

Your Result would then look like this :)

GlusterFS & Keepalived Setup
