Introduction

Linkwarden is a self-hosted, open-source bookmark manager designed to help individuals and teams collect, organize, and preserve web content. It not only functions as a tool to save and categorize important links but also ensures that the content remains accessible even if the original webpage is no longer available. By automatically saving web pages as screenshots, PDFs, and HTML files, Linkwarden combats the issue of "link rot"—the phenomenon where useful webpages disappear or change over time.

Designed with collaboration in mind, Linkwarden allows multiple users to share and work together on collections of bookmarks.
